

# InfoPath Modernization Accelerator

## Challenges:

- Microsoft has set InfoPath end of life 2023
- Many companies have pushed InfoPath beyond inherent capabilities, creating a complex and technical migration process
- The migration process presents an opportunity for solutions improvements, but requires additional time from IT to complete the development or support the business stakeholders

## How Rockhop can help:

Rockhop will work with your team to inventory existing forms in your environment, their complexity, gaps, value to your business and priority. Additionally, we will create personas definitions for internal and external users to ensure we are crafting the optimal end user experience.

With this information the Rockhop team will align the existing solutions to the ideal toolset. Based on your priorities we will create a roadmap with associated costs to modernize your InfoPath solutions.

## What to expect:

A lot of listening! We want to hear from the end users benefiting the most from these solutions. Rockhop will conduct the following activities:

- Alignment session to review business objectives, current environment and key stakeholders
- Inventory the InfoPath solutions manually or using scripts
- Create internal and external user persona definitions
- Conduct stakeholder interviews for existing solutions to understand functionality, criticality and opportunity for improvement
- Deliver a roadmap for re-platforming including timelines and costs

### What to Expect:

- 1-2 days of workshops for alignment, stakeholder interviews and discovery
- Two weeks total for analysis and roadmap creation

### Benefits:

- Expedite modernization with a clear plan to address the highest priorities needs
- Identify opportunities to improve and create business value
- Avoid security gaps with end-of-life technologies

### Related Offers:

- SharePoint Workflow Modernization Accelerator
- App Discover and Modernization
- Charge App for Power Platform
- Driving Decisions with Power BI
- Control the SharePoint Sprawl - SharePoint Site Request App

## About Rockhop

Rockhop is a Microsoft Partner fully dedicated to helping our customers transform their business with Power Platform solutions. We meet you wherever you are in your journey to envision, design, build and deploy solutions that help you solve problems and realize measurable results.

### Key Metrics:

We have 30+ years of experience working together in Microsoft professional services where we were first to the cloud

Our deep and wide global network within Microsoft and across the industry allow us to lean on our partners and most skilled experts to deliver innovation and impactful solutions.

We are excited about power Platform because of its truly transformative capabilities, and we measure it. We want to help you achieve results and use this as the compass for everything we do.

We like working together and it's core to our culture! We root for each other and for you. You will see proof in quality of our delivery and our lasting relationships.

### Our Approach:
